

Sort Modes

The navigator shall support two image ordering modes.

1. Sort by Filename

Images are ordered using natural filename sorting.

Example:

```
Image1.tif  
Image2.tif  
Image10.tif  
Image11.tif
```

This mode is useful when filenames reflect the acquisition sequence.

2. Sort by Date

Images are ordered by file modification date.

Default order: Newest → Oldest

Optional future setting:

- Newest → Oldest (default)
- Oldest → Newest

This mode is intended for workflows where recent acquisitions should be reviewed first.

Changing the sort mode rebuilds only the image index for the current directory.

The following operations always follow the active sort order:

- Next Image
- Previous Image
- Wrap-around navigation
- Background preloading

Directory navigation is unaffected by the selected image sort mode.
